Re: Manager Report and Recommendations – September 12, 2017 DDA Meeting

**6. A. MDOT Traffic Signal Modernization Project** **[Information/Discussion]**

In January, we discussed the Michigan Department of Transportation (MDOT) intention to complete a signal modernization project in 2019. The project would result in the replacement of the decorative mast arms that support the intersection traffic signals along Chicago Street at the Downtown intersections. The replacement signals are referred to as “box spans” and include a single galvanized pole on each corner of the intersection and wires spanning each of the four legs of the intersection to support the signals.

This item on the agenda is reserved for an update and discussion of the project. MDOT is asking that we make a decision on our plans within the next 30 days. My intent is to provide update of information provided by MDOT, potential project costs, and preparation for next steps. From our discussion, I will develop a list of questions that we might have for MDOT staff, and potentially schedule a meeting with MDOT reps prior to a final decision. No decision is expected at this meeting.

The attached sheets provide estimated costs from MDOT. They are difficult to follow without additional context, and I will review and explain them at the meeting.

*Please refer to the attached cost option sheet developed by MDOT and detail estimates for Category I and Category III mast arms.*

**6. B. Project Updates** **[Information/Discussion]**

This item is reserved for to address status updates on a number of projects, as identified on the agenda and any others that members may have questions about.
